- Add Features, Buttons & Applications to Software to Meet Future Needs & Requirements
- Easy to Use & Navigate Content with Simple Interface & Touch Screen Technology
- Withstands the Demanding Conditions of Institutional Environments

Secure Library Kiosks

Questions? Call 888.587.1777

With SeePoint's Legal Research Solutions for Prisons, correctional facilities can confidently provide the access to legal content that is required with the security that they demand. SeePoint's solution for prisons, which has been specifically designed for institutional use, draws upon more than fifteen years of experience designing, manufacturing and deploying kiosk products for demanding and unattended environments.

This cost-effective single source solution, which includes software, hardware, electronic law library with quarterly updates, maintenance and service, is easy to implement and maintain. SeePoint's Legal Research Solutions for Prisons allow prisons to comply with court mandated obligations and have a single point of contact regarding the solution, while leaving the work of administering a law library to SeePoint.

The electronic law library application provides meaningful access to comprehensive and current legal research materials while still providing maximum protection against risks related to Internet access by prisoners. The application, which features multi-level software security protocols, is wrapped inside a locked browser to further deter access and is delivered via a keyboardless touch screen interface to also prevent unauthorized use. To further mitigate Internet access risks, the electronic law library operates as a closed solution whether the content is provided by secure WiFi, connected by private network or is completely off line.

SeePoint's rugged and secure touch screen terminal features a highly vandal resistant powder coated, cast aluminum housing with stainless steel bezel. There are no exposed switches, cables or ports to further deter unauthorized access. The 19 inch touch displays are hammer-proof and shatterproof to provide extensive resistance to accidental or malicious activity while enabling optically clear and responsive touch screen functionality.

SeePoint's Legal Research Solutions for Prisons also dramatically reduce the challenges of creating and maintaining a traditional prison law library. Eliminate the need to house large collections of books or file page replacements and supplements by simply taking this rugged and secure touch screen terminal from the box and receiving electronic updates on a quarterly basis. This solution enables prisons of any size to manage risk confidently while improving efficiency by dramatically reducing the costs, space requirements, staffing and inmate litigation associated with prison law libraries. With the rolling cart option, the prison can bring the library to the cell, even further reducing the need for space and staff.

Rolling Cart Model

SYSTEM INCLUDES:

LexisNexis Library Software Running in Protected Secure
Browser Configured with Antimicrobial Coated Touch Screen

LCD DISPLAY:

19" Active Matrix 360 NIT LCD Panel (1280 x 1024) (Steel Bezel)
