Completely Integrated Free Standing Touch Screen Kiosk System

Receipt Printing - The Zebra TTP 2030 handles 58, 60, 80 and 82.5mm paper widths and prints at 150 mm per second with a resolution of 203 dpi. This printer features a patented presenter that displays a portion of the printout after it has been cut and can sense when the printout is touched, automatically dispensing it. The TTP 2030 enables abandoned documents to be retracted into the kiosk. The TTP 2030 is Windows-compatible and can print any font, code page, bar code or graphic supported by the operating system.

Letter Size Printing - The USMP-8100P letter size thermal printer handles paper that is 8.5 inches in width and prints at 100mm per second with a resolution of 200 dpi. This printer features a built in presenter, allowing abandoned documents to be retracted into the kiosk, and can use a paper roll up to 1000 feet in length. This printer can print in multiple directions (straight, 90°, 180° and 270°) as well as in multiple type styles (normal, 1x to 8x height and width, reverse, underscored, italic and bold). The USMP's sensor detects "near-end" and "out of paper" status.

Ticket Printing - The Lemur-K from BOCA printers is the perfect kiosk printer for high speed, high volume ticketing. Supports fan fold standard and oversized tickets.

Label, Sticker and Wristband Printing - This printer boasts an easy ribbon loading system and is perfect for low to medium volume printing. This flexible and reliable device prints at speeds up to 6" (152mm) per second. EPL and ZPL programming languages are standard.

Specifications
